Enhancing Primary Care Capacity for Cancer Survivorship Care Delivery in Community Health Clinics

The study's aims are to implement a system-level cancer survivorship care delivery intervention in partnership with CHC clinicians, patients, and community representatives; test the effectiveness of the intervention to improve patient and clinician outcomes; and evaluate implementation of the intervention guided by the Practice Change Model.

Cancer Prevention and Control Research Training and Career Development Program

The long-term goal is to reduce cancer morbidity and mortality by training innovative cancer prevention scientists that will improve the quality and impact of cancer prevention research. Trainees come from across biomedical, bioinformatics, and public health disciplines and participate in mentored training on innovation and transdisciplinary team science to improve cancer prevention and control and reduce cancer related health disparities.

Implementation of Evidence-based Interventions to Increase Colorectal Cancer Screening in Texas Federally Qualified Health Centers

The project builds on long-standing relationships with FQHC partners to increase the adoption and implementation of evidence-based approaches for increasing colorectal cancer screening (CRCS) and follow-up for underserved patients. The program enables a sustained increase in CRCS rates among FQHCs reaching severely underserved and minority populations in Texas to reduce the burden of CRC and CRC-related health disparities.

Roybal Center for Elder Mistreatment Intervention Research

The Roybal Center will lead the advancement of elder mistreatment (EM) intervention research and support new cohorts of EM investigators with one of the largest teams of funded EM researchers in existence. The Roybal Center will be designed to overcome crucial barriers preventing significant, impactful progression of EM intervention development research. This center will significantly impact the field of EM by providing a rigorous evidence base to inform clinical practice guidelines (e.g., USPTF), public policy, and service delivery ultimately reducing rates of elder abuse, neglect, and financial exploitation while supporting older adult and caregiver well-being.

The major goal is to build upon 16 years of experience in translation science and research through the Center for Clinical and Translational Sciences (CCTS) that is a well-integrated network of six

academic partner institutions across Texas and two UTHealth Houston affiliated hospital systems. CCTS has built a highly impactful system to serve large underserved and underrepresented populations within a Clinical and Translational Science Award (CTSA) program committed to diversity, health equity, access, and inclusiveness. The CCTS will develop creative and impactful solutions across conditions, populations, and settings. These solutions will enhance research effectiveness, efficiency and reach to improve patient care and promote health equity.

Multiple Sclerosis Implementation Network

The primary goal of MSIN is to improve Multiple Sclerosis (MS) practice by creating and supporting a practice-based research network providing a collaborative learning environment for clinical partners that provide care for patients with MS across the country to advance MS research and practice. We aim to achieve this goal through three specific aims: 1) Establish the MSIN - a Practice Based Research Network of clinical partners that provide care for patients with MS. 2) Establish an Implementation Research Program (IRP) enabled to conduct rapid-cycle implementation research; and conduct an initial implementation research study. 3) Generate, synthesize, and translate evidence for best practices.

This project aims to advance global implementation science (IS) in cancer control in Mexico and Latin America. LISTOS for Cancer Control - Leveraging Implementation Science To Optimize Strategies for Cancer Control will increase capacity for implementation science for cancer control in Mexico and Latin America. The project proposes to establish a new center in Mexico and carry out two cancer control implementation science research projects: 1) Implementing colorectal cancer screening in publicly funded health systems in Mexico, and 2) Implementation of integrated care for rapid diagnosis of breast cancer in Mexico.
